

Intel® 82577 GbE PHY Specification Update

February 2010
Revision 1.6

322614-002

Revision History

Date	Revision	Description
February 2010	1.6	Added Thailand as a Country Of Origin (COO) to Figure 1.
January 2010	1.5	Added Specification Clarification #1. Removed Erratum #2.
November 2009	1.4	Removed Specification Change #1. Added Erratum #2.
September 2009	1.3	Initial Public Release.

INFORMATION IN THIS DOCUMENT IS PROVIDED IN CONNECTION WITH INTEL® PRODUCTS. NO LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE, TO ANY INTELLECTUAL PROPERTY RIGHTS IS GRANTED BY THIS DOCUMENT. EXCEPT AS PROVIDED IN INTEL'S TERMS AND CONDITIONS OF SALE FOR SUCH PRODUCTS, INTEL ASSUMES NO LIABILITY WHATSOEVER, AND INTEL DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY, RELATING TO SALE AND/OR USE OF INTEL PRODUCTS INCLUDING LIABILITY OR WARRANTIES RELATING TO FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT. Intel products are not intended for use in medical, life saving, life sustaining, critical control or safety systems, or in nuclear facility applications.

Intel may make changes to specifications and product descriptions at any time, without notice.

Intel Corporation may have patents or pending patent applications, trademarks, copyrights, or other intellectual property rights that relate to the presented subject matter. The furnishing of documents and other materials and information does not provide any license, express or implied, by estoppel or otherwise, to any such patents, trademarks, copyrights, or other intellectual property rights.

IMPORTANT - PLEASE READ BEFORE INSTALLING OR USING INTEL® PRE-RELEASE PRODUCTS.

Please review the terms at http://www.intel.com/netcomms/prerelease_terms.htm carefully before using any Intel® pre-release product, including any evaluation, development or reference hardware and/or software product (collectively, "Pre-Release Product"). By using the Pre-Release Product, you indicate your acceptance of these terms, which constitute the agreement (the "Agreement") between you and Intel Corporation ("Intel"). In the event that you do not agree with any of these terms and conditions, do not use or install the Pre-Release Product and promptly return it unused to Intel.

Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined." Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them.

Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, not across different processor families. See http://www.intel.com/products/processor_number for details.

The 82577 GbE PHY may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Hyper-Threading Technology requires a computer system with an Intel® Pentium® 4 processor supporting HT Technology and a HT Technology enabled chipset, BIOS and operating system. Performance will vary depending on the specific hardware and software you use. See http://www.intel.com/products/ht/Hyperthreading_more.htm for additional information.

Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order. Copies of documents which have an ordering number and are referenced in this document, or other Intel literature, may be obtained from:

1.1 Introduction and Scope

This document applies to the 82577 GbE PHY.

This document is an update to a published specification, the *Intel® 82577 GbE PHY Datasheet*. It is intended for use by system manufacturers and software developers. All product documents are subject to frequent revision, and new order numbers will apply. New documents may be added. Be sure you have the latest information before finalizing your design.

1.2 Product Code and Device Identification

Table 1 and Figure 1 describe the various identifying markings on each lead-free device package:

Table 1. Markings

Device	Stepping	Top Marking	MM #	Description	Tray/Tape and Reel
82577LM	A3	WG82577LM	903235	Corporate Mobile and Workstation	Tape and Reel
82577LM	A3	WG82577LM	903236	Corporate Mobile and Workstation	Tray
82577LC	A3	WG82577LC	903237	Consumer Mobile	Tape and Reel
82577LC	A3	WG82577LC	903238	Consumer Mobile	Tray

Figure 1. Typical Top Marking Example With Identifying Marks (82577LC Shown)

Table 2. Device IDs

Device ID Code	Vendor ID	Device ID	Revision ID
82577LM	0x8086	0x10EA	N/A
82577LC	0x8086	0x10EB	N/A

1.3 Nomenclature Used In This Document

This document uses specific terms, codes, and abbreviations to describe changes, errata, sightings and/or clarifications that apply to silicon/steppings. See [Table 3](#) for a description.

Table 3. Terms, Codes, Abbreviations

Name	Description
Specification Changes	Modifications to the current published specifications. These changes will be incorporated in the next release of the specifications.
Errata	Design defects or errors. Errata may cause device behavior to deviate from published specifications. Hardware and software designed to be used with any given stepping must assume that all errata documented for that stepping are present on all devices.
Specification Clarifications	Greater detail or further highlights concerning a specification's impact to a complex design situation. These clarifications will be incorporated in the next release of the specifications.
Documentation Changes	Typos, errors, or omissions from the current published specifications. These changes will be incorporated in the next release of the specifications.
Yes or No	If the errata applies to a stepping, "Yes" is indicated for the stepping (for example: "A0=Yes" indicates errata applies to stepping A0). If the errata does not apply to stepping, "No" is indicated (for example: "A0=No" indicates the errata does not apply to stepping A0).
Doc	Document change or update that will be implemented.
Fix	This erratum is intended to be fixed in a future stepping of the component.
Fixed	This erratum has been previously fixed.
NoFix	There are no plans to fix this erratum.
Eval	Plans to fix this erratum are under evaluation.
(No mark) or (Blank box)	This erratum is fixed in listed stepping or specification change does not apply to listed stepping.
Red Change Bar/or Bold	This Item is either new or modified from the previous version of the document.
DS	Datasheet
PDG	Platform Design Guide
EDS	External Data Specification

1.4 Changes, Errata, and Clarifications

See [Section 1.3](#) for an explanation of terms, codes, and abbreviations used in the following tables and discussions.

Table 4. Summary of Changes

1.4.1	Specification Changes	5
1.4.2	Specification Clarifications	5
1.	PHY Does Not Maintain Gigabit Link in Low Power States	5
1.4.3	Documentation Changes.....	5
1.4.4	External Errata	6
1.	Jumbo Frames Not Supported With PCI Express* (PCIe*) Spread Spectrum Clocking (SSC)	6

1.4.1 Specification Changes

None active.

1.4.2 Specification Clarifications

1. PHY Does Not Maintain Gigabit Link in Low Power States

Clarification: While operating in power states less than D0 or operating system states other than S0, the PHY is designed to negotiate to the lowest speed possible, and maintains a link in those states only at 10 Mb/s or 100 Mb/s. If the PHY is connected to a link partner that is only capable of gigabit connections, the link is lost in these lower power states. This limitation is due to power requirements imposed by energy saving initiatives (such as Energy Star), as the additional power required to maintain gigabit connections might cause the system to exceed the level needed to meet the specifications.

Impact: When attached to a port that is limited to gigabit speed connections, the PHY loses link in low power states, and therefore network functions normally available in those states, such as Wake on LAN (WoL) or remote management, is not possible in that environment.

1.4.3 Documentation Changes

None active.

1.4.4 Errata

1. 9 KB Jumbo Frames Not Supported With PCI Express* (PCIe*) Spread Spectrum Clocking (SSC)

Problem: 82577LM is unable to support 9 KB jumbo frames when PCIe SSC is enabled in Intel® 5 Series Express Chipset.

Implication: Enabling 9 KB jumbo frames with PCIe SSC enabled might result in data overflow/underflow errors resulting in packets transmitted/received with CRC errors.

Workaround: For 9 KB jumbo frames support, PCIe SSC must be disabled.

Status: No fix for 9 KB jumbo frames.
